

Fuelling news and innovation in motor and pump technology

Welcome to **EnergEtalk**, bringing you the latest news and information from Hayward Tyler.

News

Hayward Tyler delivers the worlds largest ever subsea motor

We are proud to announce that the first of three 2500 kW subsea motors, ordered by Aker Kvaerner Subsea, to drive their seawater injection pumps on the StatoilHydro Tyrihans project in the Norwegian Sea, has been successfully tested. [See full story](#)

Celebrating 100 years of subsea motor technology

2008 is another fantastic milestone for Hayward Tyler as we are celebrating 100 years since developing the first subsea motor. The motor has clearly come a long way since 1908 when the first motor of its type was developed for marine salvage.

Record order book for Varley Pumps

Rotary Gear Pump manufacturer, Varley Pumps, a division of the Hayward Tyler Group, is pleased to announce that it saw a record turnover in 2007 and is currently enjoying a record order book for 2008. The API 676 range of positive displacement pumps complement the standard gear pump range. The pumps are hand built to a very high standard making them a popular choice for oil transfer and lubrication across multiple industries. For more information [click here](#)

Special events

Hayward Tyler take their subsea technology to China

Hayward Tyler will be exhibiting this year at the China Offshore Oil and Gas Exhibition in Beijing from 7-9 April. We are already the largest supplier of boiler circulation pumps in the region and have record order books for more units across the country.

This show gives us the opportunity to introduce our record-breaking subsea technology to a new audience at a time when so many offshore projects are emerging in China.

For more information visit our events website www.haywardtylerevents.com.

People

Hayward Tyler is enjoying strong growth across all areas of the business and to support this we are currently recruiting additional resources from engineering to senior management. For current vacancies [click here](#).

In the UK **Nick Hurt** has been appointed General Manager of our Engineered Products Division and **Steve Chesney** has been promoted to General Manager of our Services Division. Both of these roles carry great responsibility, providing direction and management at this busy time. **Richard Gamblin** has also been appointed as Supply Chain Manager who will be working closely with staff across the group to manage global sourcing.

Finally **Rob Rolland** has joined HT, Inc. as Applications Engineer. Rob will be developing proposals for equipment in customer applications. Rob has 24 years of experience with contracts for the U.S. government, petroleum companies, international, military and communications industries.

Services

Steam Turbine Upgrades

Hayward Tyler can provide an upgrade service that will bring significant benefits to the life of steam turbines. Our service and aftersales division can improve the efficiency and reliability of Hayward Tyler turbines and a range of other OEM's. If you would like to receive a copy of our new brochure please email marketing@haywardtyler.com or call our service team on +44 (0)1582 731144.

Customers confirm HTI Boiler Water Circulating Pumps are the Premier Choice

Hayward Tyler, Inc. can offer complete boiler water circulating pump conversions for global enterprises in 2008. These include, but are not limited to, Ingersoll-Rand, Westinghouse and FUJI pumps. These pumps will be converted to Hayward Tyler's successful BWCP product line. For more information please contact marketing@haywardtyler.com.
